The DR590-2CH IR and DR590W-2CH IR models use the same firmware as the DR590-2CH and DR590W-2CH models, respectively.

## ➤ At a glance

The following diagrams explain each part of the Infrared interior camera.

The illumination sensor detects when it is dark and activates the IR LEDs for optimal interior recording.

## STEP 1 Install and power up

Install the front camera behind the rear view mirror. Install the Infrared interior camera at the top of the front or back windshield.

### Warning

- Do not install the product in a location where it can obstruct the driver's field of vision.

Turn off the engine. Open the cover of the microSD card slot, gently push the card into the slot until it locks into place and close the cover.

- B** Peel off the protective film from the double-sided tape and attach the front camera to the windshield behind the rear-view mirror.

- B-1** **Optional GPS receiver:** Plug in the GPS receiver and attach it in a corner of the windshield. Tuck the cable into the windshield trim using the pry tool.

- C** Adjust the angle of the lens by rotating the body of the front camera. We recommend pointing the lens slightly downwards ( $\approx 10^\circ$  below horizontal), so as to record video with a 6:4 road to background ratio.

- D** Peel off the protective film from the double-sided tape and attach the Infrared interior camera to the front or rear windshield. Adjust the angle of the lens by rotating the body of the camera.

- E** Connect the front camera ('Rear' port) and the rear camera ('V out') using the rear camera connection cable.

- F** Use the pry tool to lift the edges of the rubber window sealing and/or molding and tuck in the rear camera connection cable.
- G** Plug the power cord into the cigarette lighter socket and the front camera.
- H** Use the pry tool to lift the edges of the windshield trim/molding and tuck in the power cord.

- ① Turn on the engine. The BlackVue dashcam will power up and start recording. Video files are stored on the microSD card. When the microSD card fills up, the newest video files will start to replace the oldest video files (called **loop recording**) – so you will always have the most recent video files.

### Note

- There are 3 recording modes: Normal, Event and Parking. The dashcam starts recording in normal mode, switches to event mode when an impact is detected, and switches to parking mode if the vehicle is stationary for 5 minutes. For parking mode recording, a Parking Mode Battery Pack (Power Magic Battery Pack) or a Parking Mode Hardwiring Kit (Power Magic Pro) is required.
- When you run the dashcam for the first time the firmware is automatically loaded onto the microSD card. After the firmware has been loaded onto the microSD card you can customize settings using BlackVue Viewer on a computer.
